

Key findings

- Fitted $\sigma = 3.96$ min
erfc tail = 47.2%
- $\sigma = 4.0$ min (sampling interval)
erfc tail = 46.9%
- Sigma range:
[2.0, 11.9] min
(0.5 $\times$ to 3 $\times$ fitted value)
- Tail range: 46.8–47.5%
- Total span: 0.7 pp

Conclusion

The 47% tail decomposition
is robust to σ choice.
A single shut-in suffices.
